

SC

SAI CHARAN KOTARI

 saicharankotari@gmail.com |  +918885214225

SKILLS

Programming Languages: Java, JavaScript, C/C++ ,C#,Python, MySql, Assembly Language

Web & Backend: Html/Css,JavaScript ,React, Node.js,Express.js, MongoDB,Tailwind, GitHub

Tools & Technologies: Burpsuite, AWS,Postman,Ghidra,Figma, Nmap, Blender

EXPERIENCE -

AI DeepFake Video Detection

- Built an AI-powered DeepFake Video Detection system using the Xception CNN model from Hugging Face, capable of analyzing video frames to identify manipulated content with high accuracy.
- Trained a real time **computer vision and obstacle detection model** using supervised learning and sensor fusion, enabling a stick mounted assistive robot to detect pedestrians and navigate safely for visually impaired users.

Full Stack Developer

- Designed and developed a full-featured social platform with secure authentication using JWT and B-crypt encryption
- Implemented core social features including user posts, event updates, third-party social app integration.
- Crafted responsive UI/UX with Tailwind CSS and Daisy UI, ensuring seamless experience across devices
- Built clean, RESTful backend APIs with Express.js and MongoDB for efficient data management
- Implemented Model-View-Controller (ASP.NET MVC) design patterns for maintainable and scalable codebases

WebApplication Penetration Testing

- Performed complete Phase-1 to Phase-4 testing, including parameter discovery, API endpoint mapping, authentication analysis, and vulnerability exploitation (XSS, SQLi, File Upload Abuse, Path Traversal).
- Designed and used custom documentation templates, finding reports, and reproduction-step formats based on industry recon checklists.

Bug Achievement

- Discovered broken authorization flaw in Lovable that exposed sensitive (Paid functionality) functionality, unprotected API route.
- Detected the issue during structured recon using directory enumeration, parameter analysis, and Burp Suite manual testing, and use of value's exposure on frontend from insepect through developer tools.

Core Computer Science, Reverse Engineering & Software Practices

- Computer Science Fundamentals: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems
 - **Reverse Engineering:** Binary analysis, API tracing, request/response manipulation, logic flow analysis using Burp Suite and debugger-based inspection
 - **Secure & Reliable Software Development:** REST API design, input validation, authentication flows, performance and reliability testing
 - **Version Control & Collaboration:** Git & GitHub (branching, pull requests, issue tracking)
 - **Competitive Programming:** DSA-focused problem solving on LeetCode with emphasis on optimization and edge cases
 - **Technical Documentation:** Vulnerability reports, reproduction steps, API behavior documentation, and structured findings
-

EDUCATION -

High School | Bhashyam High School – India || 2020-2021

Intermediate | Bhashyam Junior College – India || 2021 - 2023

B.Tech: CSE (AI & Robotics) | Vellore Institute of Technology – Chennai || 2023 - 2027
